Need Help or Advice
Call Top-Notch

ALKO International supplies most electric brake systems. We have installed a controller of the type recommended by ALKO. This controller senses the “G-Forces” acting on the vehicle, not the pressure on the brake pedal or the time the brakes have been applied.

Correct setting of the controller is vital for correct operation of the brakes.

Kelsey-Hayes-Lemmerz Controller	
Setting Sequence	
Level Ground Essential	
Connect Trailer Plug	
Set GAIN control to MAX	
Ignition on Foot on brake pedal	LED shows RED
Adjust Level Control	Led shows DIM White lever perpendicular to car floor
Back off GAIN control and then adjust to obtain balanced braking. If the Caravan/Trailer pulls you back, roll gain control back, if it pushes you forward roll gain control forward.	

**ALL repair/claims must be authorised by Top-Notch/ALKO prior to work being commenced.
Call 0408 268 911**

Your controller was fitted in accordance with accepted practices. We will cover claims of faulty fitting where relevant proof is provided.

A Manufacturers Warranty for parts proved to be faulty covers your Brakes & Controller. We will endeavour to facilitate any claim on your behalf.

Congratulations

On the purchase of your new Caravan
We wish you many Happy Travels

We thank you for allowing us to install your
“Electric Brake Controller”.

We now hope we can be of further service to you.

According to instructions given by the Brake Manufacturer, a first service on your Caravan Brakes (not the controller) is required between 300 and 1000km to comply with Warranty Conditions and then every 10,000km.

(We suggest after your first “try-out trip” and then every 10,000km or every 12 months)

This service can be carried out at your home (within the Sydney & Wollongong Metro areas, the Southern Highlands and the Lower Blue Mountains)

The service involves checking the functioning of your electric brakes, inspection of brake linings and magnets and regreasing of all wheel bearings on you caravan.

Testing of your brake controller & system and a refresher instruction of its operation is also offered if required.

Call Top-Notch for your service or visit our website today
